TOWNSHIP 013N RANGE 027E Section 25 SAN JUAN MEADOWS

203-49 1 of 2

e Precautions:

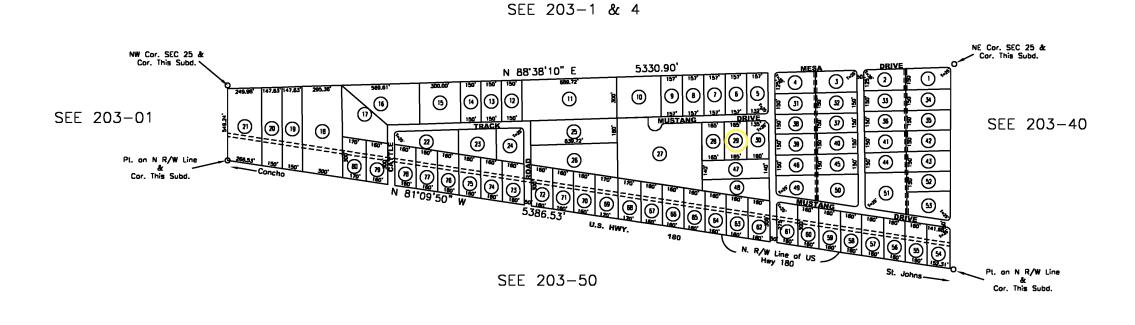

This drawing is a digital conversion that is based on a scanned image from an original scaled paper manuscript on file in the Apache County Recorder's Office. The original paper manuscript was not used in this conversion.

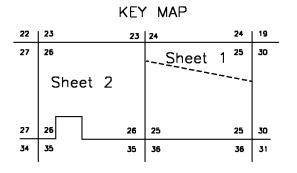

This drawing represents a composite of what appeared to be partially corrected vector work found in the "A1" drawing, supplemented in the conversion by the scanned image, where the giolipide Decusars the heighbility of the settal dimensions was infinited in both the A1 and secrenced image, the species represent graphic approximations of lowing the sean lines, which were transformed into income PLAS boundaries. Thus, while spatial approximations of the purcels in relationship to each other have been established, users should be customed that singular error in parcel dimensions could exist.

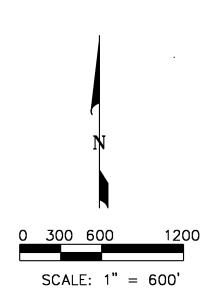

This conversion is intended for use in the County's Geographic Information System(GIS). Parcel Map Application, and as such is built to Resource-Grade mapping standards. The subdivision boundaries have been adjusted to be coincident with the PLSS or other common boundary lines that are defined as the standard for the Apache County GIS.

While every attempt has been made to return as much of the original information as possible, deviations can occur due to: a) literationism on the transformation to the PLSS or other boundary lines; b) mathematic computations usually the PLSS or other boundary plies within your ot apprece with the shower dimensioning visitings or illegible dimensions in the scanned document. Deviations, processes, and assumptions made in the convention from the scanned image to this AutoCAD DWG format are described in the internal deviative more practice, activating deviative conversions in the careful confidence and adult.

Into crawing is not income to rise in energy, construction, or commission of regal notations. Distribution describes placed are known for consistency with the seamed image, and do not imply a level of energy greater. The intended knowner-Greate mapping stander. Because of the legibility of the seamed image(s), users should first consult the original paper manuscript. Some of the illegible dimensions found in the seamed image have been left off:
