1 of 2

Use Precautions:
This drawing is a digital conversion that is based on a scanned image from an original sealed paper manuscript on file in the Apache County Recorder's Office. The original paper manuscript was not used in this conversion.
This drawing represents a composite of what appeared to be partially corrected vector work found in the "A1" drawing, supplemental to the conversion by the scanned image, where applicable. Because the legibility of the actual dimensions was limited in both the A1 and scanned image, the periodic graphic approximations for showing the main lines, which were transformed to show PLSS boundaries. Thus, while spatial approximations of the parcels in relationship to each other have been established, users should be cautioned that significant errors in parcel dimensions could exist.
This conversion is intended for use in the County's Geographic Information System (GIS) Parcel Map Application, and as such is built to Resource Grade mapping standards. The subdivision boundaries have been adjusted to be consistent with the PLSS or other common boundary lines that are defined as the standard for the Apache County GIS.
While every attempt has been made to retain as much of the original information as possible, deviations can occur due to: a) limitations on the transformation to the PLSS or other boundary lines; b) mathematical computations using the PLSS or other boundary lines which may not agree with the shown dimensions; and c) missing or illegible dimensions in the scanned document. Deviations, omissions, and assumptions made in the conversion from the scanned image to this AutoCAD DWG format are documented in the internal drawing properties, internal drawing conversion notes, and individual object meta data.
This drawing is not intended for use in design, construction, or determination of legal boundaries. Dimensional decimal places are shown for consistency with the scanned image, and do not imply a level of accuracy greater than the standard Resource Grade mapping standard. Accuracy of the legibility of the scanned image(s), users should first consult the original paper manuscript. None of the legible dimensions found in the scanned image have been left off.

Use Precautions:
This drawing is a digital conversion that is based on a scanned image from an original sealed paper manuscript on file in the Apache County Recorder's Office. The original paper manuscript was not used in this conversion.
This drawing represents a composite of what appeared to be partially corrected vector work found in the "A1" drawing, supplemented in the conversion by the scanned image, where legible. Because the legibility of the actual dimensions was limited in both the A1 and scanned image, the parcels represent graphic approximations following the scan lines, which were transformed via known PLSS boundaries. Thus, while general approximations of the parcels in relationship to each other have been established, users should be cautioned that slight error in parcel dimensions could exist.
This conversion is intended for use in the County's Geographic Information System (GIS) Parcel Map Application, and as such is built to Kenamer's Grid mapping standards. The aerial vision boundaries have been adjusted to be consistent with the PLSS or other common boundary lines that are defined as the standard for the Apache County GIS.
While every attempt has been made to retain as much of the original information as possible, deviations can occur due to: a) limitations on the transformation on the PLSS or other boundary lines; b) mathematical computations using the PLSS or other boundary lines which may not agree with the shown dimensions; and c) rounding or legible dimensions in the scanned document. Deviations, omissions, and assumptions made in the conversion from the scanned image to the AutoCAD DWG format are documented in the internal drawing properties, external drawing conversion notes, and individual object metadata.
This drawing is not intended for use in design, construction, or determination of legal boundaries. Dimension decimal places are shown for consistency with the scanned image, and do not imply a level of accuracy greater than the intended Resource Grade mapping standard. (Because of the legibility of the scanned image(s), users should first consult the original paper manuscript. Some of the illegible dimensions found in the scanned image have been set to 0).
